

21. RESEARCH MISCONDUCT

Research misconduct, as defined in the Universities UK Concordat to Support Research Integrity, is behaviour or actions that fall short of the standards of ethics, research and scholarship to ensure that the integrity of research is upheld. The University is committed to ensuring that research is conducted to the highest scientific and ethical standards. Research misconduct, in all its various forms, is taken extremely seriously as it devalues research, and the reputations of both UWE Bristol and its researchers. The University has developed, and will follow, rigorous procedures for the investigation of research misconduct whenever it is alleged. The University's position on research misconduct is covered by the [University Research Misconduct Policy and Procedures](#). Researchers are encouraged to familiarise themselves with, and follow, the University's policies, codes, standards, procedures and guidance, as well as accepted high standards of practice in their field of research, to avoid any instances of research misconduct, advertently or inadvertently, occurring.
